

Zoo
ECOMUSEUM

Play and learn with us!

1. Colour the carnivore first: a carnivore is an animal that only eats meat!
2. Then, colour the herbivore: an herbivore is an animal that only eats veggies, fruits and vegetation!
3. Finally, color the animal that is omnivore: an omnivore is an animal that eats a little bit of everything!

Once you're done coloring everything, decide what the animal will eat for breakfast!

Zoo
ECOMUSEUM

Play and learn with us !

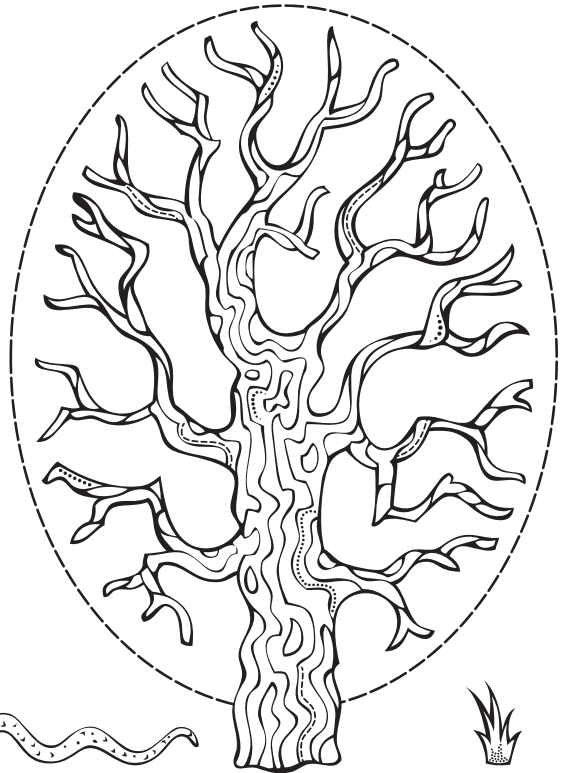

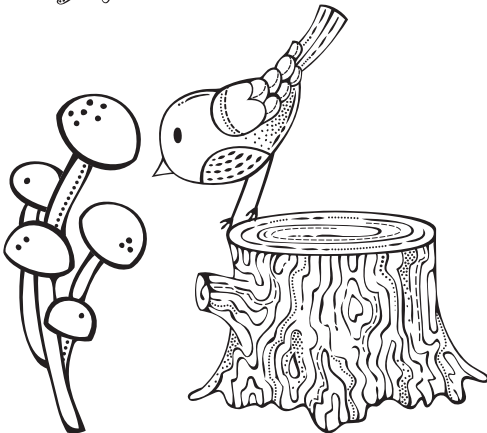

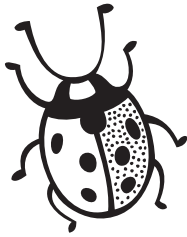

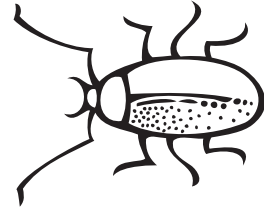

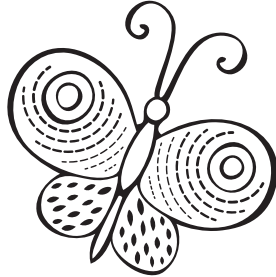

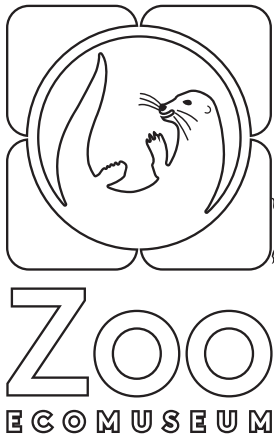

Colour in the owls first. Then colour in the tree they might nest in !

Bonus

It's your turn to draw ! Add either the sun or the moon.

What do owls prefer ?

Many species of owls are nocturnal, meaning that they prefer to be active at night!

Play and learn with us !

First, colour in the insects! Hint : insects are small animals that have six legs.

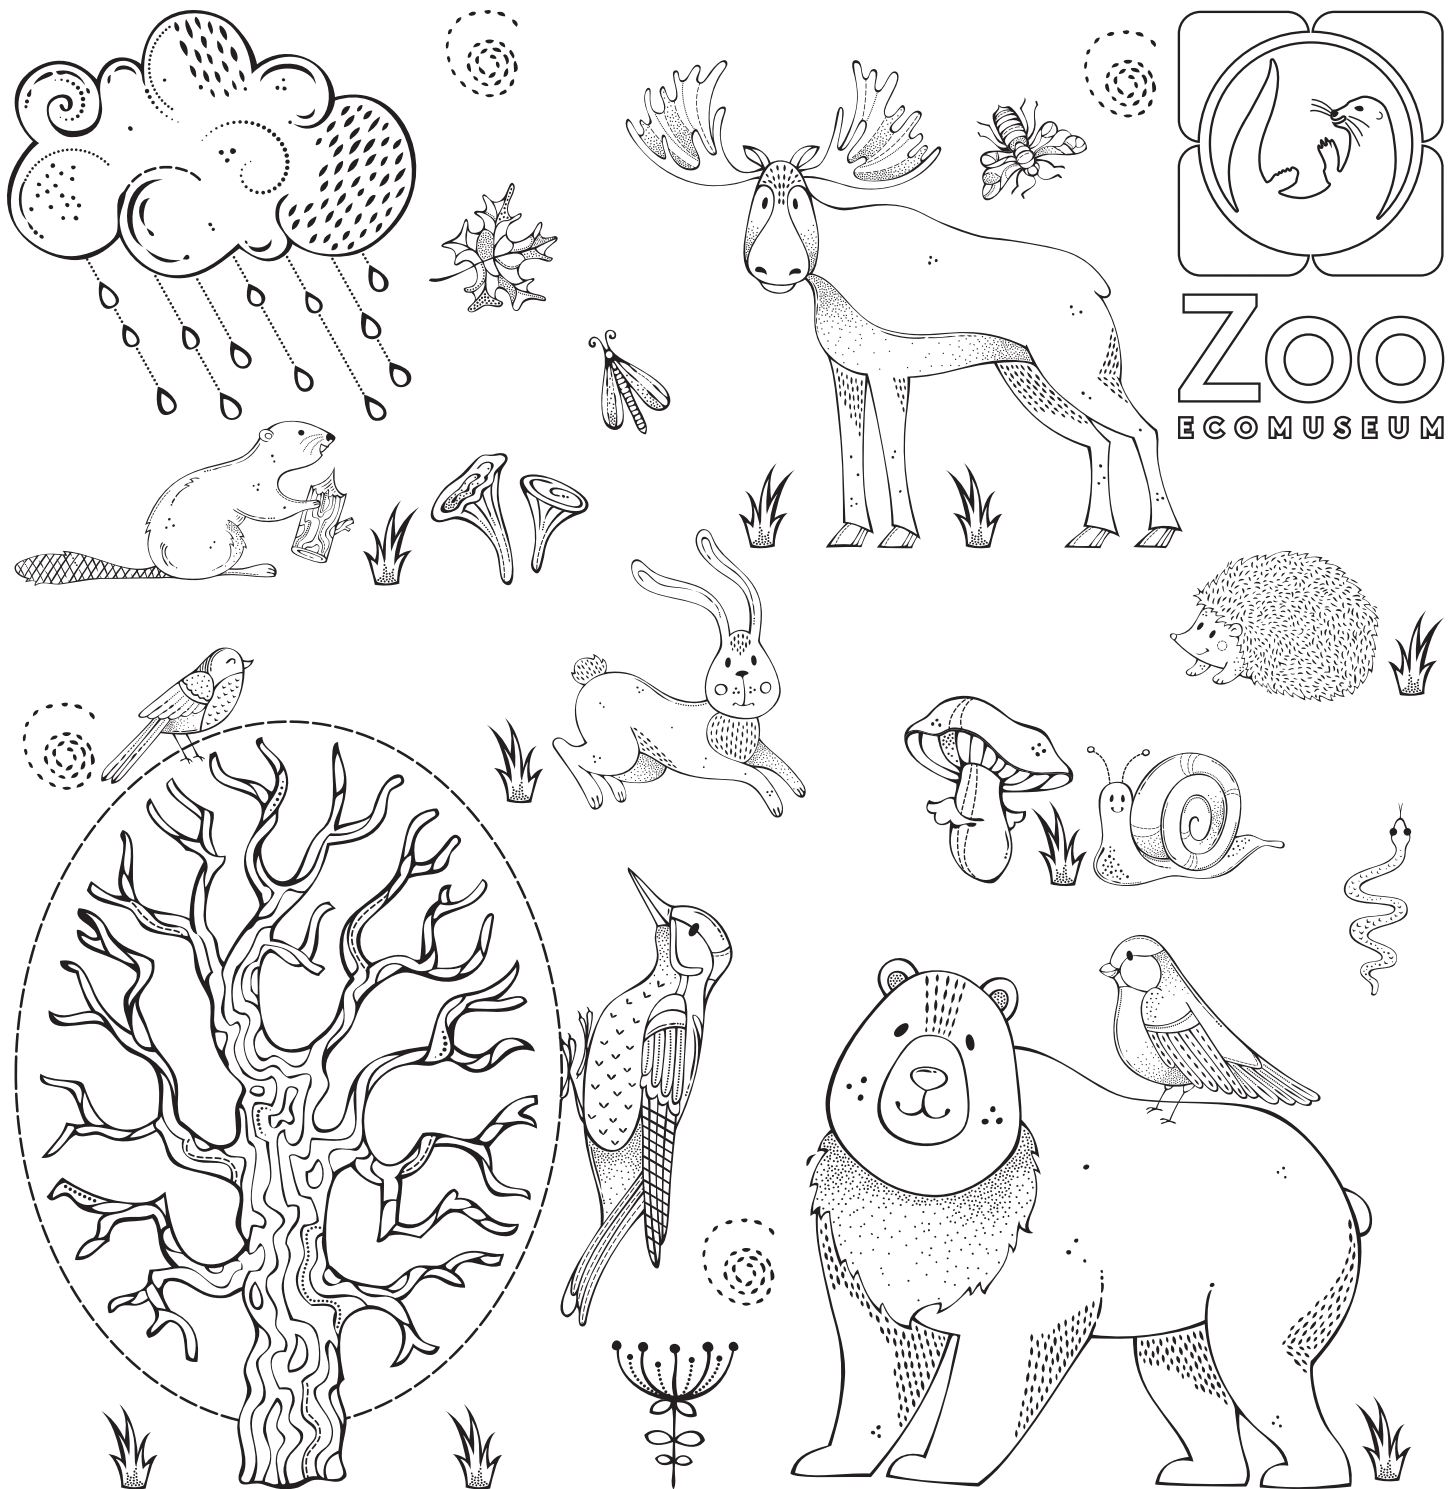

Bonus

Then, colour in the birds and the snake.

Did you know that these animals love to eat insects ?

They are very important, because they help us control the insect populations.

Without them, there would be WAY too many insects everywhere !

Play and learn with us !

Colour in the mammals first.

Hint : Mammals are animals that have fur and feed their babies with milk

Bonus

Next, colour in the animals with feathers : the birds !

How many feathered animals are there? _____

Last step ! Colour in the animal that has scales on its body : it's a reptile !

Psst... don't forget to colour in the insects too !
