

Zoo
ECOMUSEUM

Play and learn with us!

1. Colour the carnivore first: a carnivore is an animal that only eats meat!
2. Then, colour the herbivore: an herbivore is an animal that only eats veggies, fruits and vegetation!
3. Finally, color the animal that is omnivore: an omnivore is an animal that eats a little bit of everything!

Once you're done coloring everything, decide what the animal will eat for breakfast!

Zoo
ECOMUSEUM

Play and learn with us!

Colour in the owls first. Then colour in the tree they might nest in!

Bonus

It's your turn to draw! Add either the sun or the moon.

What do owls prefer?

Many species of owls are nocturnal, meaning that they prefer to be active at night!

Zoo
ECOMUSEUM

Play and learn with us!

First, colour in the insects! Hint: insects are small animals that have six legs.

Bonus

Then, colour in the birds and the snake.

Did you know that these animals love to eat insects?

They are very important, because they help us control the insect populations.

Without them, there would be WAY too many insects everywhere!

Play and learn with us!

Colour in the mammals first.

Hint: Mammals are animals that have fur and feed their babies with milk

Bonus

Next, colour in the animals with feathers: the birds!

How many feathered animals are there? _____

Last step! Colour in the animal that has scales on its body: it's a reptile!

Psst... don't forget to colour in the insects too!
